

Surfing the web is an important business tool but, without the right monitoring and control, the business benefits can be negated by reduced productivity, system downtime, data loss and potential legal liability.

An Igaware web filtering appliance puts you in control with an easy to use admin interface and powerful reporting.

Web Site Blocking

Predefined categories enable you to easily block millions of potentially inappropriate websites including adult, betting etc. Blocking can be enabled by machine and user.

Content Blocking

Dangerous files e.g. exe files, can be prevented from being downloaded from the Web.

Company Defined Blocking

White and black lists allow you tailor the system to match your needs.

Reporting

An easy to use web interface allows you to see web usage in summary and in detail. Management reports can be automatically emailed (pdf format) to chosen recipients.

Automatic Updates

URL databases are continually updated automatically.

Scheduling

Access to the web can be controlled according to day and times that you define.

Active Directory Integration

If you have an active Directory Server, the Igaware appliance can connect to this for user logon details, allowing single sign-on. The result is detailed reports of web use by individual users.

Technical Specification

General

- High performance web filtering appliance
- Automatic updates and system monitoring
- Easy to use web interface
- Highly configurable
- Compatible with Windows, Apple & Linux O/S
- Scalable
- Available in range of hardware configurations including small form factor, tower and rackmount servers

Filtering Functions

- URL Filtering
 - By categories
 - Company defined white and black lists
- Content Filtering
- Reporting
 - Web reporting system
 - Auto generated reports delivered by email
- Scheduled access by day and time
- Active Directory Integration

Support

- Fully managed solution
- Proactive system monitoring
- Automatic updates
